Effort

ENEOS GLOBE has consistently delivered LP gas

to its customers across Japan over the years,

based on our desire to support a safe, secure,

and comfortable lifestyle, and a bright future for the earth.

Guided by our slogan of

“Create a safe and reliable living, an eco-friendly society, and a sustainable future.”

we will continue to work as a unified team to further enhance

our services and boldly tackle the challenge of realizing a decarbonized society.

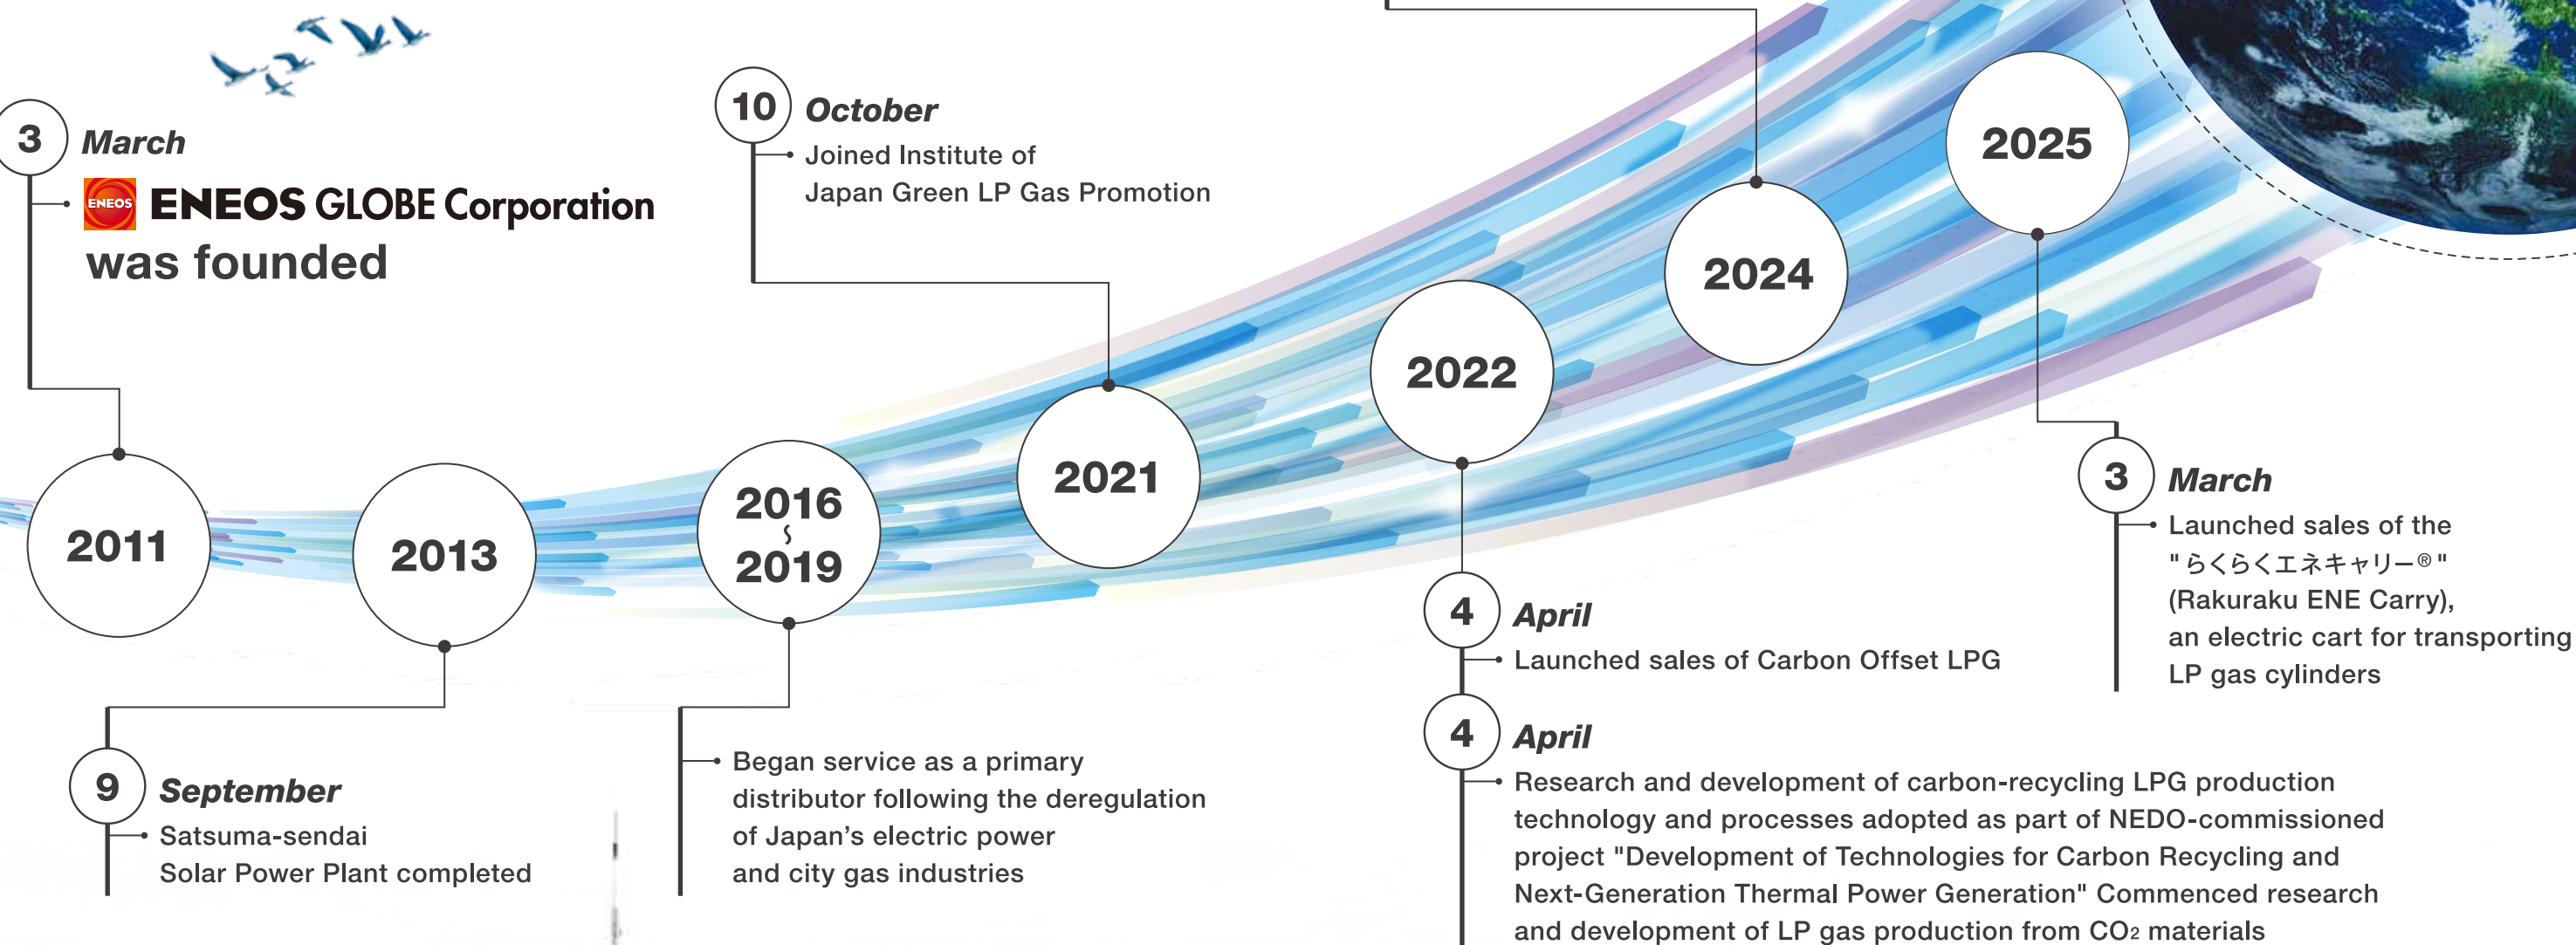

History

Corporate History

ENEOS GLOBE Corporation

ENEOS GLOBE Corporation was founded on 1 March 2011 through the integration of ENEOS Corporation's LPG Division with Mitsui Marubeni Liquefied Gas Co., Ltd. As a leading LPG importing and distributing company, we work closely with our shareholders-ENEOS Corporation, the largest energy corporation in Japan, and Mitsui&Co., Ltd. and Marubeni Corporation, two of the biggest trading firms in Japan-to ensure a safe and stable LPG supply for our domestic customers and to develop global operations.

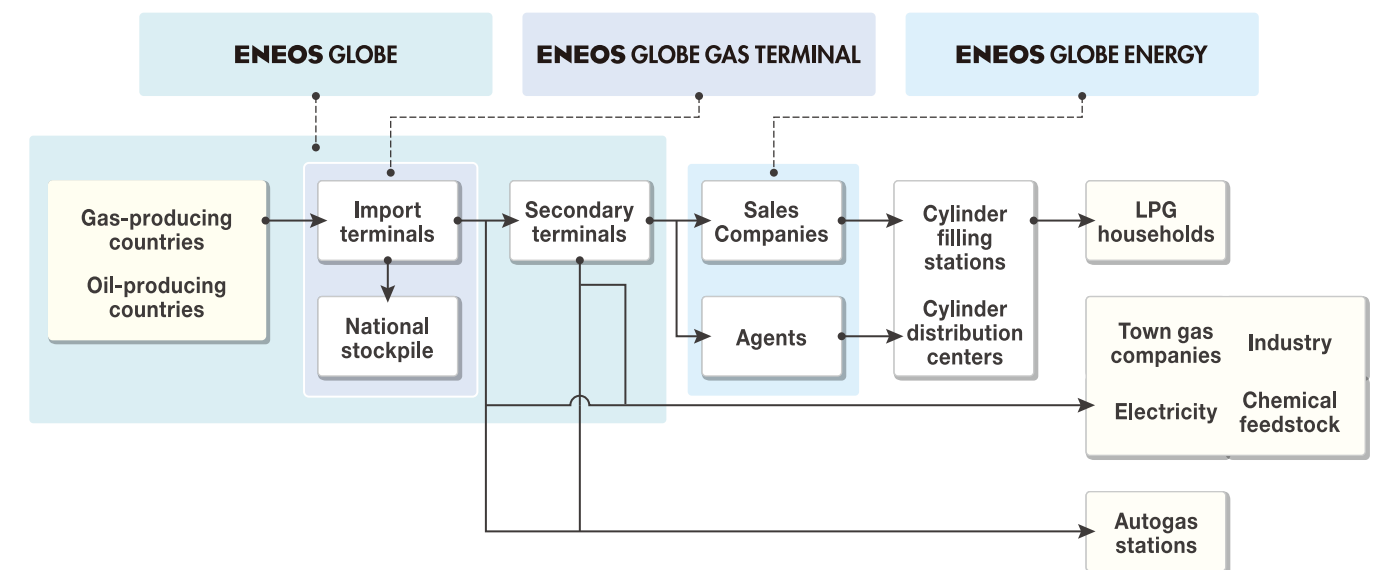

Challenge of realizing a decarbonized society

Supply Chain

ENEOS GLOBE Corporation is an industry leader in LPG sales in Japan. Our employees conduct their day-to-day duties with a strong sense of responsibility in order to achieve the important mission of ensuring a safe and stable supply of LPG—a critical lifeline infrastructure. As the industry leader by market share in domestic LPG sales and having supported the lives of consumers from the outset of the LPG industry, we have maintained a proactive and future-oriented approach by providing proposals on domestic policies, laws and regulations, and rules related to LPG through involvement in industry organizations.

1

Importing LPG from Diversified Sources

In addition to maintaining stable imports based on our long-standing relationships with gas-producing countries in the Middle East, we are working to further diversify our supply sources and strengthen our competitiveness by acquiring new supply sources, including recently expanding imports of LPG from the United States and Canada.

2

Industry-Leading Number of Import Terminals

Realizing stable supply through robust logistics with the largest number of own import terminals in Japan.

3

Safe, Stable Logistics

With the largest number of shipping terminals in Japan, we strive to ensure a stable supply of LPG through the nation's most extensive supply chain, which we have developed in cooperation with LPG distributors throughout Japan. We are also working to strengthen our business continuity measures, including those of our affiliates, in order to prevent supply chain disruptions and ensure the stable delivery of LPG.

Challenge

Challenge of realizing a decarbonized society

1 Sale of Carbon Offset LPG

We offer Carbon Offset LPG, with the aim of helping create a carbon neutral society. Through the sale of Carbon Offset LPG, we will contribute to the global environment while answering diverse customer needs.

2 Research and Development

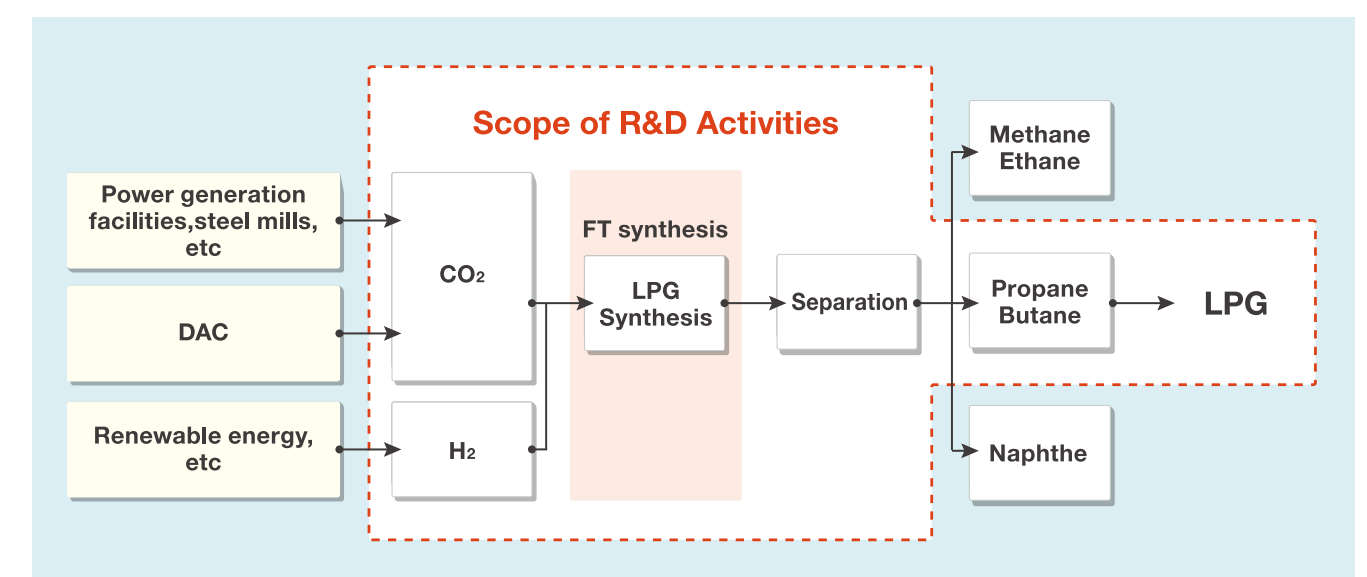

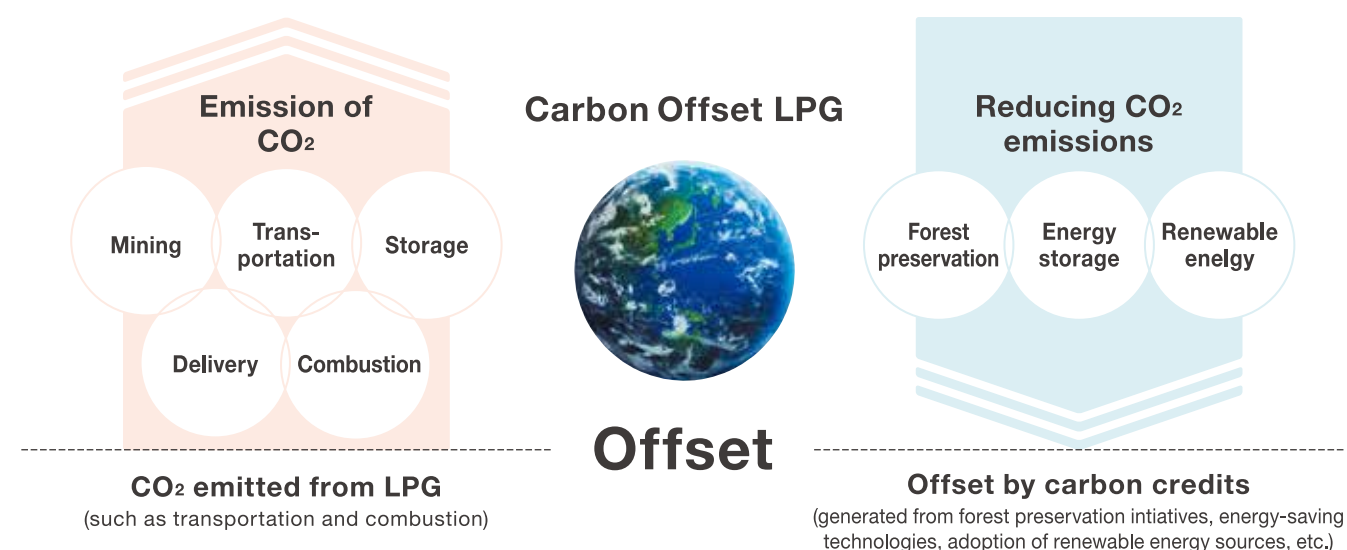

To realize a carbon-neutral society, we have the Carbon Neutral Promotion Group within the Corporate Planning Department. We are dedicated to ensuring that LPG remains a safe and reliable energy source for the future. To achieve this, during fiscal years 2025–2026, we are advancing research and development on the production of Green LPG with support from NEDO (New Energy and Industrial Technology Development Organization).

About Carbon Offset LPG

We offer Carbon Offset LPG, which is considered to have net zero CO₂ emissions throughout the LPG lifecycle (from mining to combustion), by purchasing voluntary carbon credits certified by international NGOs and other organizations, or "J-Credits" certified by Japanese government based on the amount of greenhouse gas emissions reduced or removed through introduction of energy-saving devices and forest management. Our Carbon Offset LPG can be utilized as part of our customer's initiatives for CSR and ESG, or to report CO₂ offsetting in accordance with Act on Promotion of Global Warming Countermeasures and Act on Rationalizing Energy Use.

R&D for Enhancing Catalyst Practicality and Improving Production Process for Carbon-Recycled LPG (NEDO Subsidized Project)

The target of this project is to develop technology for carbon-recycled LPG using CO₂ and H₂ as raw materials. Over the two years starting in fiscal 2025, we work on improving catalysts, establishing mass-production methods, designing a bench-scale plant, and evaluating technical feasibility for domestic implementation, utilizing the results of the NEDO commissioned project conducted from 2022 to 2024.

Sustainability

At ENEOS GLOBE Corporation, we are committed to building a corporate group that is trusted as a reliable partner by our customers, and to contributing to the realization of a safe, secure, and comfortable lifestyle as well as a carbon neutral society. To this end, we have designated eight priority areas in our business activities: "high ethical standards," "compliance," "safety and the environment," "human rights," "human resource development," "health," "quality," and "societal contribution". Moreover, in order to realize a sustainable society in which both corporate growth and the resolution of societal challenges can be achieved in tandem, we are committed to an ESG-oriented management approach that takes into consideration the environment, society, and governance, as part of a responsible management philosophy as an ENEOS Group company and a group-wide commitment to ESG initiatives.

Create a safe and reliable living, an eco-friendly society, and a sustainable future.
